Title : Sustainable forest management systems - Application of the pan-european criteria for sustainable forest management
Scope : This document specifies the requirements for a sustainable management system, enabling an organization responsible for a certified area to:
a) define a sustainable management policy and objectives;
b) implement, maintain, and improve a sustainable management system that meets legal requirements, pan-European criteria for sustainable management, and other relevant stakeholder requirements applicable to aspects of its activity with potential social, economic,

and environmental impact;

c) achieve the intended results of its sustainable management system by improving its performance;

d) demonstrate to third parties the conformity of its sustainable management system by obtaining PEFC accredited certification in sustainable forest management and/or Trees Outside the Forest.

This standard is applicable to the certified area managed by an organization at the individual, group of owners, or regional level.

Title : Acoustics - Classification of the acoustic quality in housing buildings - Methodology

Scope : This standard presents a methodology and respective criteria for classifying the acoustic quality of residential buildings. The main objective of this standard, and consequently of this methodology, is to provide building users with the specification of an acoustic quality class, taking into account current regulations and, where appropriate, supplementing it with

additional relevant information. In this sense, the standard aims to support the administration and the community by establishing an acoustic quality assessment process which, together with other classification systems, constitutes a tool to complement the verification of the quality of residential buildings. It also aims to inform users and owners about the acoustic quality of the housing units and buildings in which they live or which they use.

Title :

Bars of weldable steel with special characteristics of ductility for the reinforcement of concrete

Scope :

The purpose of this standard is to establish the chemical, mechanical, geometric and weight characteristics of weldable steel corrugated or grooved bars with special ductility characteristics used for reinforcing concrete structures and supplied as end products in straight or coiled form.

It does not apply to other products used for reinforcing concrete, such as:

Weldable steel bars (UNE 36068).
 Wires and strands for prestressed steel reinforcement (UNE 36094).
 Weldable steel wires (UNE 36099).
 Smooth wires (UNE 36731).
 Electro-welded meshes (UNE 36092 – UNE 36061).
 Electro-welded meshes with special ductility characteristics (UNE 36060).
 Basic reinforcements (UNE 36739)
 Galvanised steels.
 Epoxy resin-coated steels.
 Corrosion-resistant steels.

Title : Liquid fuels - Domestic fuel oil - Gasoil for heating purposes - Requirements and test methods

Scope : The requirements and tests specified in this document shall apply to "extra light fuel oil" and "extra light oil - sulfur free".

With regard to the sulfur content, two qualities are defined in this document (extra light fuel oil and extra light fuel oil - sulfur-free). Extra light fuel oil - sulfur-free is only suitable for

use in such burner systems, for which there is a corresponding permission from the burner manufacturer. In certain plants, according to the manufacturer's specifications or local wastewater regulations, only extra light sulfur-free heating oil may be used.

Title : Vibration and shock – Measurement systems – Part 2: Measurement of airborne shock waves for assessing their impact on buildings and structures

Scope : This document specifies requirements for measurement systems and equipment used to measure pressure from airborne schock waves.

It also provides guidance on the placement and installation of the measuring equipment. This document is intended for application to measurement systems used to assess the risk of damage to buildings and structures caused by airborne shock waves. The measurement systems specified in this document may consist of a combination of different types of measuring equipment, such as instruments, sensors, and recording devices, as well as computer-based data collection and analysis systems. The measurement systems specified in this document are intended for measuring airborne shock waves where the source is primarily construction work involving blasting.

Title : Alpine ski boots with improved walking soles - Interface with alpine ski-bindings - Requirements, test methods and marking (ISO 23223:2025)
Scope : This document specifies requirements, test methods and marking for alpine ski-boots with improved walking soles that are used with systems of alpine ski-bindings for improved walking soles with attachment at the boot front and boot rear, the proper release function

of which depends on the dimensions and design of the interfaces.

Alpine ski boots with improved walking soles are intended to a better walkability without affecting the function of the alpine ski binding designed for improved walking soles.

This document is applicable to ski-boots of sizes 15,0 and larger [Types A (Adults) and C (Children)] in the Mondopoint system.
